

Ares QR-G Guard Tour Verification System for Smart Phones

State of the Art IoT

Features & Benefits for Management

- Ares QR-G Pro. version for Android Smartphones with "Man Down" Alarm capability.
- Installation and setup in less than 10 minutes.
- Reduces supervision costs; reports will be transmitted from remote locations to the area supervisor in seconds, notwithstanding these might be thousands of miles away.
- Generates complete Tour Reports that include GEO verified QR Checkpoints, Sites, Tours, Officer in charge, Phone ID, Date & Time, Messages, Photographs, and a complete Tour evaluation, that includes omissions analysis.
- Reports can be easily and readily viewed on a smartphone, tablet or a PC running Microsoft Excel or Google Sheets.
- Stand Alone – can operate on-line or off-line; databases are encrypted and compartmentalized within each phone.
- Phone synchronizes with Google Drive™, Google Drive™ synchronizes with your PC. You get instantaneous transmission!
- No need for a monthly or yearly subscription

With the click of a button the supervisor will receive in seconds, complete tour Reports that can be easily reviewed in Excel® or Google® Sheets,

- Can also visualize Security Tours on Google Maps and Google Earth™

Emergency and Man Down Features

- ✓ Besides detecting and counting steps, the "Step Sensor" and "Step Counter" allow the system to detect if the Security Officer is not moving, this could mean he is hurt or incapacitated, the elapsed time for non movement alarm is fully configurable. If no movement is detected for the configured time, an SMS Alarm with GPS coordinates will be transmitted to Headquarters.
- ✓ Alert button: When pressed, sends an SMS emergency message and initiates an emergency phone call to headquarters; this way the officer can quickly call for backup if needed.
- ✓ Tour scheduling can be programmed via the "Interval Timer" which gives a specific time period where the guard must complete the tours and transmit. If he fails to transmit, the report will be sent automatically to HQ; also, an SMS will be sent to HQ advising guard failed to transmit.
- ✓ Impact sensors and accelerometers: If the security officer falls and is hurt or incapacitated, the App will also detect the impacts and then detect immobility, this will trigger an SMS emergency message to Headquarters.

Inactivity has been detected, 15 minutes John Smith : [4.6715002,-74.0714279](tel:4.6715002,-74.0714279)

11:17 • SMS

Press in case of emergency

An alert has been activated for the guard FELIPE A. DURAN B : [4.6691473,-74.0524876](tel:4.6691473,-74.0524876)

Incident reporting via messages and photos

Security Officers can readily and easily key-in messages, when required. Also they can take photographs at any moment, these photos as well as the messages will be transmitted along with the reports. A photograph is solid proof of a situation or condition and can depict a thousand words. Messaging is extremely important, as unwanted situations which can create hazards must be noted and corrected.

App Overview

Ease of Use:

Once the App is installed, and configured, the security officer requires only 4 simple buttons to operate the App: Record Checkpoint, Messages, Send Photos and Transmit Reports. The rest of the functions and buttons are only for the use of the supervisor; configuration takes only 10 minutes.

Home Screen

Record Checkpoint

Take Photo

With our desktop Software "QuickReport". You will be able to receive and process reports from thousands of phones, storing all information in one central database.

QuickReport (V 19.11.16)

Features Microsoft SQL Server database engine.

QR Checkpoints & Badges

Polycarbonate UV stabilized for outdoors.

QR Codes are of common use nowadays, for a myriad of applications; we give the user the ability to print his own QR codes, these can be laminated and wall mounted with ease. We also provide polycarbonate wall mount plaques for outdoors. "No need to touch the QR codes", as these can be easily read by any smartphone at a distance of 12 inches.
